## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 2, 4-17 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art fails to show a demodulating circuit for demodulating a pulse signal including runs of identical '1' or '0' symbols including: a hysteresis comparator comprises a comparator element having an inverting input terminal for receiving the first reference voltage, a non-inverting input terminal for receiving the differentiated signal; a logic level converting unit for converting the first state of the intermediate signal to the first logic level and converting the second state of the intermediate signal to the second logic level; a differentiating circuit comprising a differentiating capacitor coupling the pulse signal to the non-inverting input terminal of the comparator; an inverting amplifier with a negative feedback resistance; a limiting element for limiting an amplitude of the differentiated signal; a low-pass filter for removing high-frequency noise from the pulse signal. Therefore, claims 2, 4-17 are presently allowed.

### ***Conclusion***

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
